University of Alaska

UNIVERSITY of ALASKA

Certificate of Special Recognition

The University of Alaska hereby extends its sincere appreciation and formal recognition to

Dr. Majid Mollanadali Pishnamaz, PhD in Applied Chemistry

for his pioneering exploratory research on the feasibility of systemic vaccine delivery via the rectal route using suppository formulations.

Dr. Pishnamaz's work, including the exploratory proof-of-concept study "Initial Exploratory Study on the Feasibility of Rectal Vaccine Delivery" and the initial assessment of immunogenicity of inactivated (Influenza) and live-attenuated (BCG) vaccines in human volunteers, represents a bold and innovative step toward developing non-invasive, thermally stable, and potentially self-administered vaccination platforms.

This recognition is granted in appreciation of his scientific curiosity, commitment to experimental rigor, and his contribution to expanding future possibilities in global vaccinology and public health.

We extend our special thanks to Dr. Majid Mollanadali Pishnamaz for his dedication to advancing applied biomedical research.
